

## Transform Rotate and Scale

Go to Workplane\New Sketch and then draw a rectangle and then an ellipse

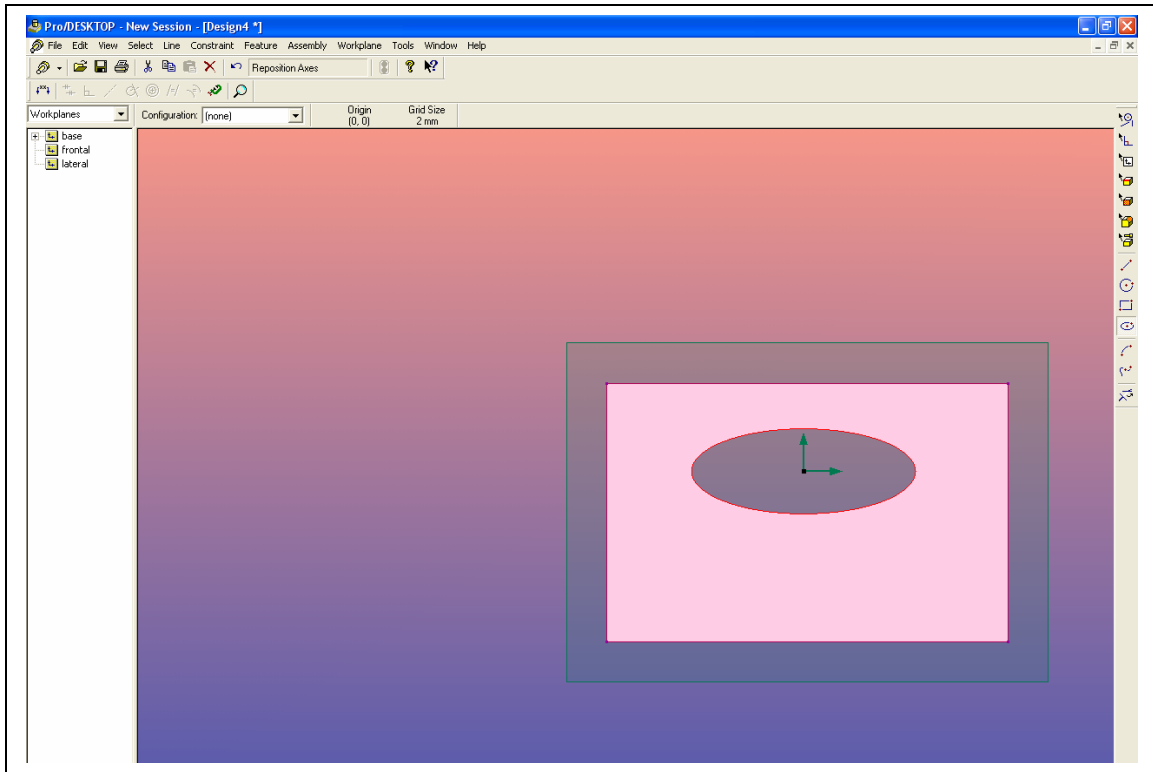

Right click anywhere in the design to get to dialogue box and then position the cursor in the centre of the ellipse and click

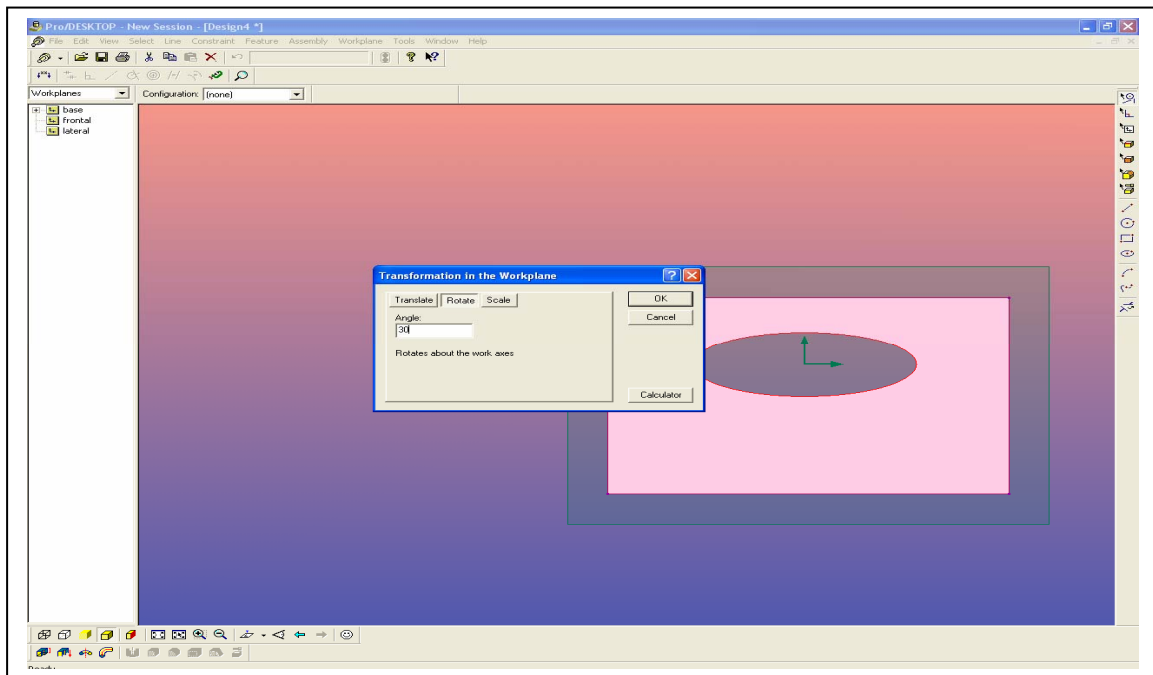

**Note** when you are Repositioning the axis the centre of the ellipse pre highlights with a black square as you move to the centre. If you click here the axis will be placed in the centre.

## Transform Rotate and Scale

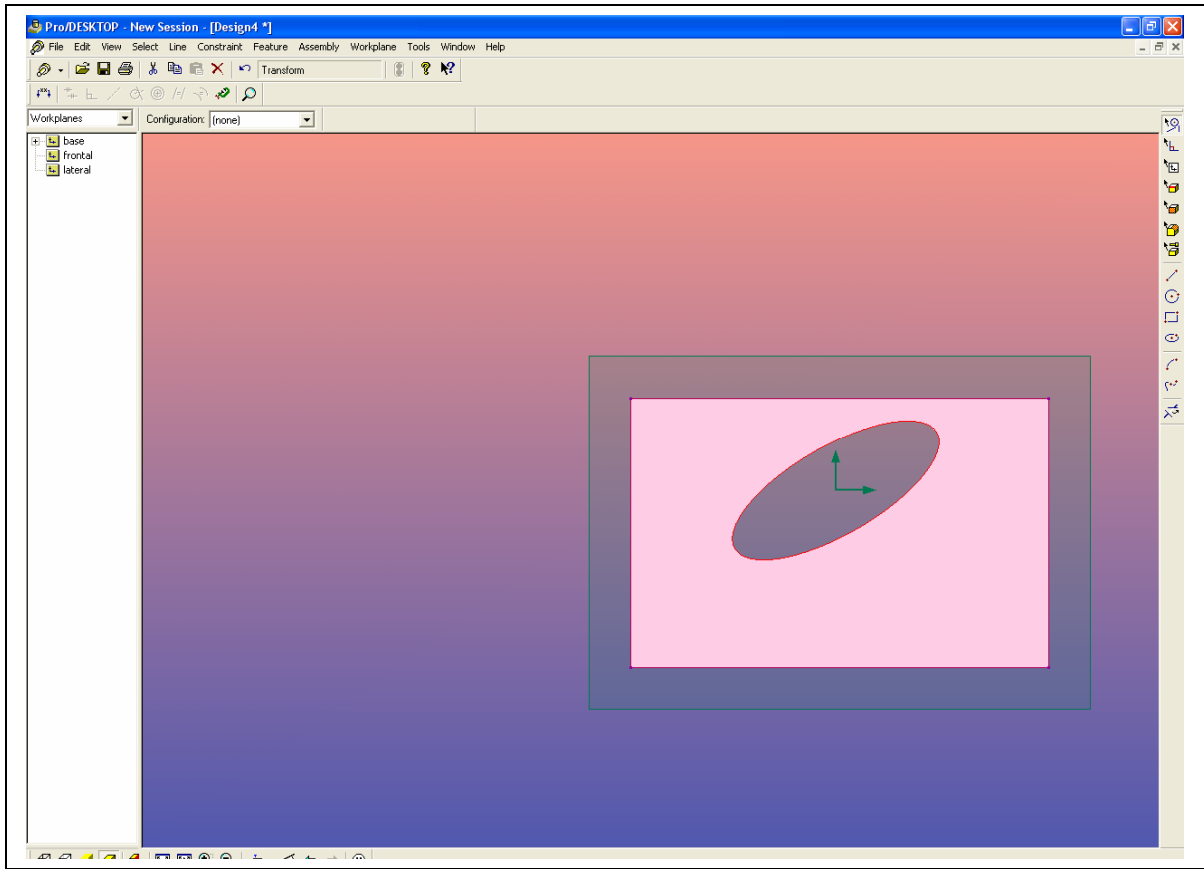

Let us now select the ellipse **ONLY** and **Rotate** it through 30°

Click on the ellipse line so that it turns **RED**

## Transform Rotate and Scale

Select the **Rectangle** only so its lines are **RED** and Scale it down down by .5
